

Commercial aircraft type-rating training programs

CAE offers pilots one of the industry's most advanced and best training programs, covering a wide spectrum of commercial aircraft types. For all your courses and through every stage of your pilot career, you can rely on CAE for consistent and standardized training of the highest quality.

CAE's pilot training programs combine CAE's innovative methodologies, knowledgeable instructors and advanced simulation technology for a truly unique learning experience. All training is carried out using computer-based training tools, flight training devices and Level C and D full-flight simulators.

Real-world experience

CAE trains its clients using a practical and operational integrated learning approach for better learning retention and a real-world learning experience. CAE's type-specific training courses are available to commercial aircraft operators and include initial, recurrent, refresher and upgrade courses. Alternative recurrent, supplemental and advanced classes are also available. In addition, CAE offers a new hire pilot evaluation program, jet familiarization/bridge courses and instrument flight rules (IFR) renewal training. Courses are offered in a traditional classroom environment, and some are available remotely via e-Learning solutions.

Authentic and true

The caliber of our training and technology has earned us the confidence of original equipment manufacturers (OEM) like Airbus, Boeing and Bombardier, to name but a few. Over the years, several OEMs have entrusted us with the development of their training programs and with the provision of entitlement training. To ensure that we meet the needs of their customers and provide a training experience that is both authentic and true to the aircraft, we work closely with each OEM to develop and evolve specific training programs. Our broad range of aircraft simulators will continue to expand within our network, and as we continue to add to these and other partnerships, we will continue to offer superior training to an ever-increasing customer base.

Dedicated training centres

Each training centre in CAE's global training network provides customers with the latest technologies and training methodologies, and best-in-class service. The centres feature our fully integrated classrooms, full-flight simulators and training devices, briefing rooms and lounges.

At each of our training centres, you will find the same quality of instruction, service, courseware and technology that distinguishes CAE as a global leader in aviation training and services. With a training network that strategically spans across five continents, CAE makes training easier and more convenient for you to train locally, keeping you closer to home.

Why train with CAE?

- We offer cost-efficient training solutions that ensure the highest levels of safety and address specific training needs.
- Our curriculum—both theoretical and practical—is approved by regulatory authorities from around the world, such as the FAA, JAR, EASA and Transport Canada, and we deliver operator-specific training.
- Our highly qualified instructors bring with them years of expertise and dedication to ensure thorough transfer of knowledge.
- We offer flexible scheduling options and most of our training centres are conveniently located near airports and hotels, saving you additional travel expenses.
