

CAE has an unparalleled breadth of experience in helicopter simulation, training and mission rehearsal. Borrowing from its extensive variety of military rotary wing platforms around the world, CAE also provides customer-driven, scenario-based training solutions for a number of civilian helicopter applications. These include the Bell 412, Sikorsky S-76B and the AugustaWestland A109 and AW139.

With aviation safety number-one priority at CAE, your mission-ready pilots will be one step ahead.

Civil Helicopter

Mission Ready

Few companies in aviation training are more widely recognized than CAE. The company is a world leader in innovative simulation and modelling technologies, which are applied to comprehensive, integrated training programs.

This is particularly evident for rotary-wing aircraft as CAE has designed training systems for the greatest variety of helicopters, including a range of military and civil platforms.

Unequivocal customer care

Mission readiness is the name of the game and CAE will tailor training to customer-specified, real-world scenarios. Starting with standard training, from initial to type-conversion through to recurrent and refresher, CAE's focus is on improving safety and training efficiency while producing operationally-ready pilots. Rigorous, comprehensive synthetic training programs ultimately lead to crew proficiency.

On a global scale, CAE clients take advantage of leading-edge simulation technology, experience and focus. Throughout the process, CAE offers a culture of service where pilots benefit from a truly unique learning opportunity.

Technology With a Competitive Edge

CAE's leadership in new and innovative technology is what allows for the creation of exceptionally authentic training environments in which pilots are immersed in a synthetic representation of their eventual, real-world missions. Revolutionary rotary-wing simulation technologies such as CAE's blade element rotor model (BERM), vibration platform and ground handling models help create the most realistic helicopter synthetic training imaginable.
