

Crew Management Solutions

Optimize crew utilization, enable cost control and ensure compliance

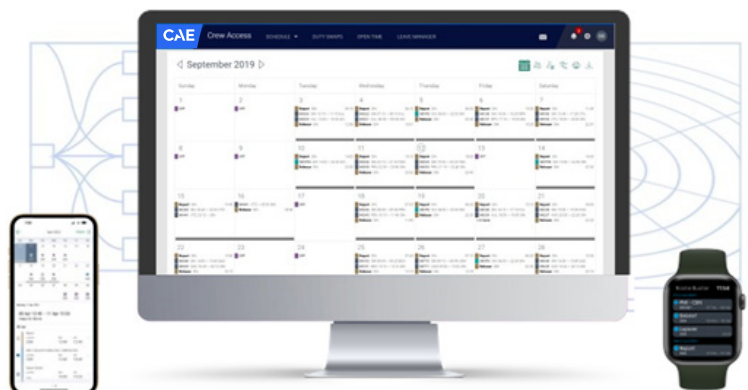

Crew Management is a revolutionary solution designed around the principle of configuration. Operators can make changes to workflows without the need for additional development or customization including search, filters, templates, reports, rules and user interface preferences.

We provide a stand-alone optimizer that maximizes, planned absences such as vacation, administrative duties, and training without sacrificing operational impact. Moreover, the product reduces the cost of travel and coverage between locations, in other words, to ensure staff receives training in one location staff are not re-positioned from their home base for coverage.

Best of all, the product can plug and play with both CAE products, Operator home-grown systems or other COTS software systems.

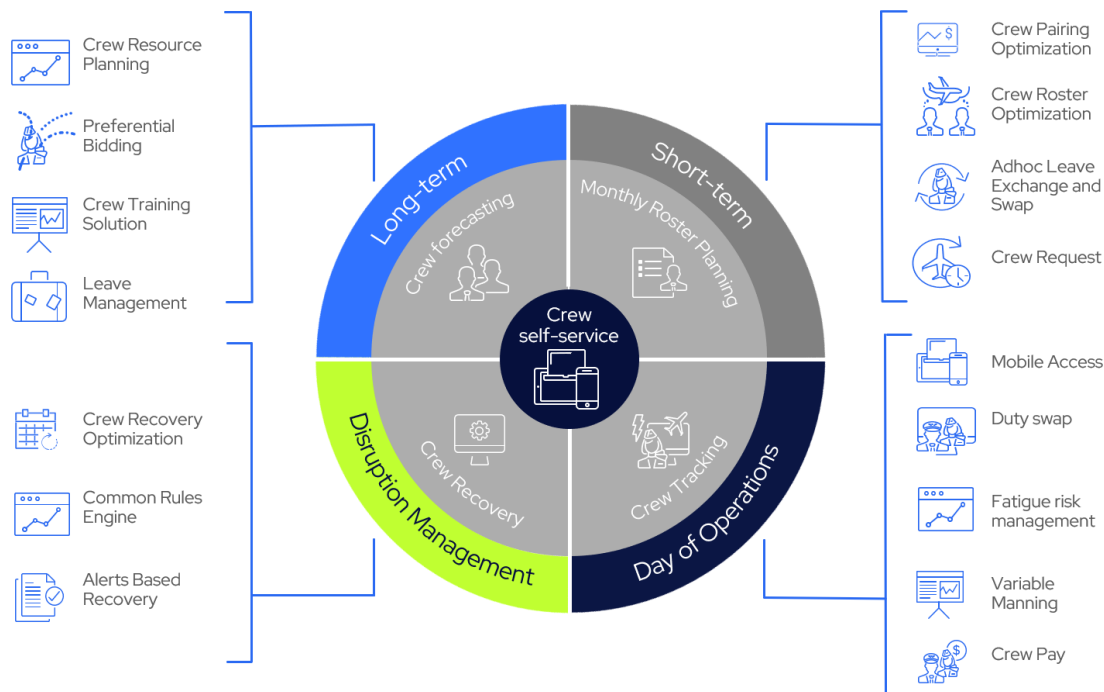

Key Benefits

- **Control Costs**
Find the most cost-effective ways to manage crew expenses
- **Maintain Compliance**
Track training, certification and recency in the same place as all other crew data
- **Optimize Crew Utilization**
Find the way to get the best effort your team has to offer

Crew Management Solutions

Optimize crew utilization, enable cost control and ensure compliance through enhanced long-term planning, innovative tracking and management, and disruption management decision support.
