

FLIGHT OPERATIONS SOLUTIONS  
FOR BUSINESS AVIATION

# Operations Control Solutions

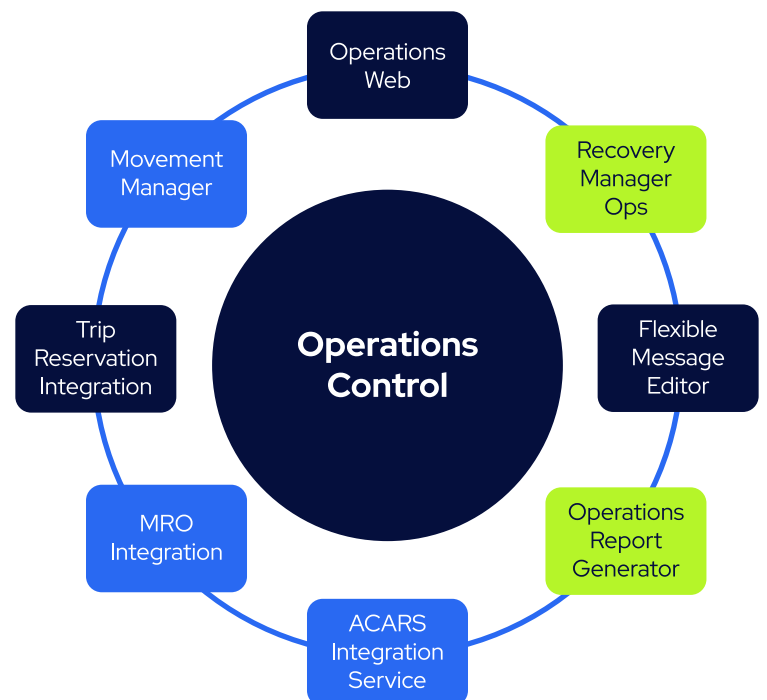

## The industry's most comprehensive operations management system

Operations Control enables business aircraft operators to gain a competitive advantage by making optimal use of aircraft. It also allows them to execute the best operational plan to meet commercial objectives by tapping into innovative solutions.

### Key Benefits

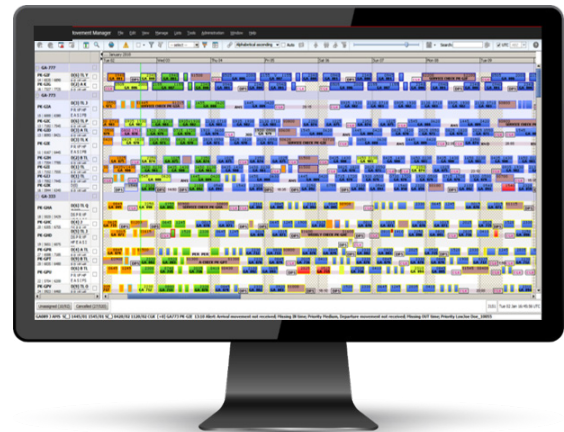

- **Flexible integration** options to update in-house and third-party systems
- **Access through multiple channels** to operational information outside the Operations Control Center
- Data and cost analysis for **real-time decision making** as well as historical investigation
- **Proactive, intelligent analysis** and decision-making support

# Operations Control Solutions

## Movement Manager

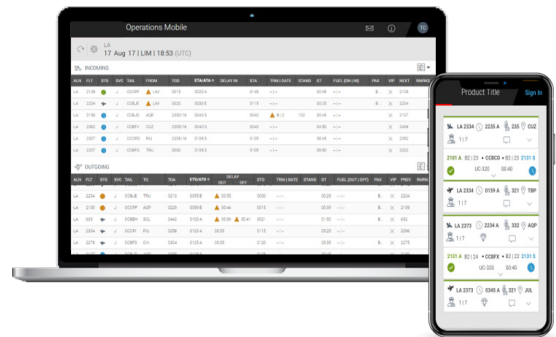

- Focus on configuration, not customization
- Easy to learn and use through intuitive design
- Advanced functionalities (robust scenario management, configurable messaging)

MANAGE

## Operations Web

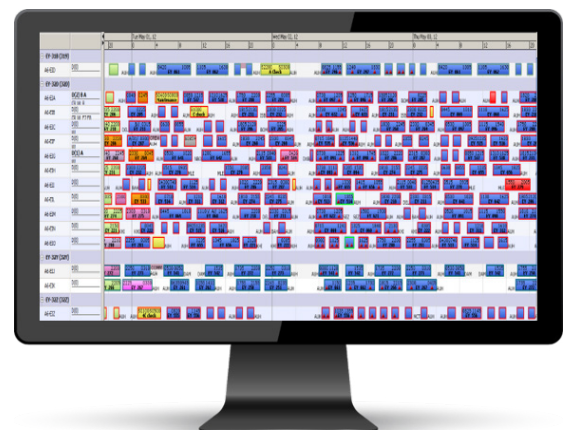

- HTML5-based application and responsive design
- Automated workflows (fuel uplift updates)
- Advanced functionalities (turn around management)

COMMUNICATE

## Recovery Manager Ops

- Optimized schedule adjustments with revised aircraft routings
- Seamless integration with core tracking system
- User access to optimization parameters and scenarios
