Ahead of what's next

The ultimate data-driven decision-making platform

Flightscape helps operators breakdown operational silos as well as improve performance and profitability. Operations Control, Crew Management and Engagement, Flight Management, Airport Management and In-Flight Services Management, provide operators with an end-to-end solution that uses the power of data to improve decision making.

Flightscape

Ahead of what's next

Flightscape's integrated platform delivers end-to-end operational management solutions for airlines. Across the domains of Operations Control, Crew Management, Flight Management, In-Flight Services Management, and Airport Management, Flightscape enables operators to deliver operational efficiencies, reduce operating costs, and maximize cross-team collaboration - all with the goal of enhancing the passenger experience and deliver on their brand promise.

Cloud enablement | Open, flexible architecture | Stability and security

Operations Control

Operations Control enables operators to gain a competitive advantage by making optimal use of aircraft and executing the best operational plan to meet commercial objectives by tapping into innovative solutions.

Crew Management

Crew Management is designed around the principle of configuration. Customers can make changes to workflows without the need for solution development or customization, including search, filter templates, reports, rules and user interface preferences.

Flight Management

Flight Management combines the core functions of flight operations to deliver the industry's lowest cost flight plans along with increased productivity. By establishing a shared operational picture, airlines can achieve maximum savings.

In-Flight Services Management

In-Flight Services management is an end-to-end, caterer neutral product. It spans all aspects of service planning, meal ordering, forecasting, operations, materials management, financial controls and reporting.

Airport Management

Airport Management provides flexible resource management and optimization tools that can increase operational efficiency, decrease costs and improve the customer experience.
