

Flight Explorer Mobile

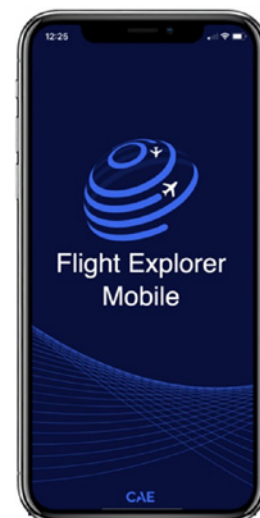

A powerful, reliable and real-time decision support tool

Flight Explorer is an integrated flight following and management decision support tool that provides members of the aviation community the system features they require to improve operational efficiency and the performance of their business.

Flight Explorer goes beyond “flight following,” incorporating multiple data feeds, dynamic weather overlays, situational alerts, predictive weather and air traffic tools to make Flight Explorer an essential flight operations management tool. Whether you run a major, regional, or commuter airline; a global air express or air cargo company; a major or regional airport; an air charter service; a fixed-based operation (FBO); or an airline related service; Flight Explorer helps your business make informed decisions on how best to manage your fleets, crew and overall flight operations.

Mobile decision-making tool

- Flight Explorer Mobile is a companion app to Flight Explorer Professional. It extends the alerting and tracking capabilities to mobile devices which allows on the go access to flight status, flight alerts and real time tracking
- Putting the power of Flight Explorer in a mobile solution ensures situational awareness of your fleet wherever you are

Flight Explorer Mobile

Key features

Dashboard

- Flight Status: Enhanced situational awareness via a synthesized view of your flights
- Timeline: Summary of your fleet's departing flight status over the next 4h
- Taxi Status: View current taxi time values across the fleet
- Priority Notifications: Stay focused on the most urgent tasks with automatic notifications when a deviation from the flight plan is detected

Fleet Monitor

- Keep track of your flight in a simple and tailored list, all in real time
- Critical information is displayed at a glance
- Modular filters to stay focused on what is most important for you

Airport Monitor

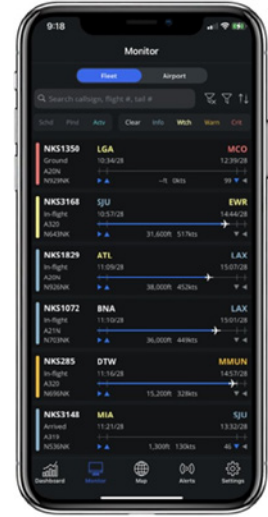

- Access to valuable airport information including METARs, TAFs, and NOTAMs
- Automatic map of incoming and outgoing flights
- Modular filters to always have the most relevant information.

Map

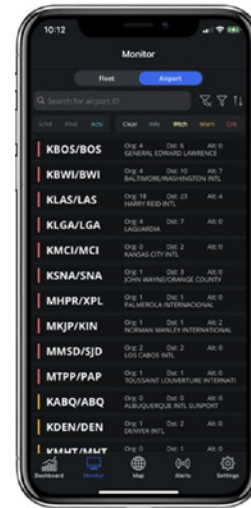

- Display all flights/individual flights/your fleet/incoming and outgoing flights from an airport
- Map layers and weather layers display critical real time information directly on the map
- Ability to search for a specific flight or airline
- Ability to focus on a specific airport or flight
- Enhanced situational awareness wherever you are
