AVIATION DIGITAL SOLUTIONS

Operations Control

Execute the best operational plan at all times

Operations Control enables airlines to gain a competitive advantage by making optimal use of aircraft and executing the best operational plan to meet commercial objectives by tapping into innovative solutions.

Key benefits

- Create a collaborative environment with common situational awareness
- Maximize aircraft utilization while meeting complex compliance and regulation requirements
- Track and document aircraft maintenance
- Adapt to continuously evolving conditions
- Recover from disruptions with speed and accuracy

CAE
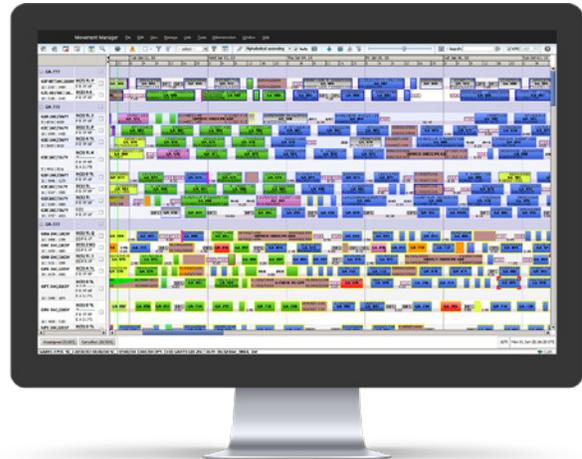

Operations
Control

Movement Manager

Manage aircraft resources effectively
- Maintain synchronized operational schedule through comprehensive situational awareness
- Manage by exception, supported by comprehensive set of operational alerts
- Enhanced passenger experience, using seamless bi-directional real-time integration with passenger reservation system
- Improve operational efficiency, with streamline workflows and the ability to use decision support tools

Recovery Manager Ops

Respond with speed and accuracy
- Seamlessly transition from standard to irregular operations with integration of Movement Manager and Recovery Manager Ops
- Optimized, cross-functional recovery analysis based operational and cost parameters
- Consider cost parameters in recovery including fuel passenger and crew
- Maintain transaction history and comprehensive audit trail

Operations Web

Extend situational awareness beyond Operations Control Center
- Access to real-time operational information
- Extending common situational awareness to broad set of stakeholders
- Incorporates key features from existing web solutions to support the operations
- Repository for historical data to enable operational audits
