CAE**Rise**™
TRAINING SYSTEM

Real-time Insights & Standardized Evaluations

Your worldwide
training partner
of choice

CAE

How does CAE Rise™ complement your pilot training?

CAE Rise™ training system provides you with a new level of insight on your pilots' training performance.

CAE Rise™ equips your instructors and you with electronic capabilities that enable objective performance evaluations. In addition, CAE Rise™ augments your instructors' ability to better identify training gaps in your full-flight simulator training sessions. The valuable insights provided by CAE Rise™ will drive the creation of more effective and efficient training programs that will enhance the safety of your flight operations.

The benefits of CAE Rise™ are:
- Real-time objective pilot assessments
- Detailed analysis and reports on micro/macro training trends
- Instructor and training delivery standardization
- Electronic grading and training records to deliver training efficiently

CAE Rise™ training capabilities

Electronic Training Suite (ETS)	Standard	Optional
Electronic lesson plans	●	
Electronic grading and competencies	●	
Electronic training records	●	
Session debrief viewer		●
Operators' SOPs		●

Real-Time Data Analytics	Standard	Optional
Objective training event insights	●	
Dashboards	●	
Auto-grading		●
Operator-specific training events, competencies and grading scale		●
Training program consulting services and reports		●

CAE Rise™ training system capabilities

Electronic Training Suite

CAE Rise™ electronic training suite enables a standardized and efficient approach to training. Sessions are presented to the instructor as detailed **electronic lesson plans** on their iPad™ and allow training data to be collected during the training session. Data-driven assessments, electronic grading, and competencies are digitally recorded during training and designed for easy implementation into advanced training programs. At the end of each session, the instructor and pilots sign off electronically and results are securely stored as electronic training records.

Electronic lesson plans allow easy access to operators' SOPs to reinforce while training. During the post-training debrief, instructors can rapidly access a **session debrief viewer** that highlights a pilot's specific areas of development and thus creating a tailored and efficient training experience.

Session Debrief Viewer

Real-Time Data Analytics

Objective assessments are generated by a CAE proprietary, cloud-based detection and grading engine. CAE Rise™ provides your instructor with a **training scorecard** in real-time, providing **auto-grading** and **insights** to evaluate your pilot's performance. Better than the naked eye, CAE Rise™'s objective assessments allow better utilization of an instructor's assessment to increase focus on monitoring non-technical skills and root cause analysis.

CAE Rise™ streamlines collections of micro and macro level data to produce powerful visualizations that will help you to identify underlying risks in training through routine and systematic trend monitoring.

The CAE Rise™ **dashboards** and analytical reports illustrate the Training Risk Profile (TRP) of your flight operations to include areas of improvement. CAE Rise™'s training intelligence will allow development of a robust curriculum that enables early mitigation of forthcoming flight operational threats and risks.

Training Scorecard with Auto-Grading and Insights

How do you better train a pilot?

With better training systems.

Why choose CAE?

Backed by over 70 years of experience, CAE is the training partner of choice of aircraft manufacturers and operators the world over. With innovative training equipment solutions and comprehensive cadet to captain training programs, CAE is the best suited partner to support operators' evolving pilot training and resourcing needs.
