

A photograph of two technicians, a man and a woman, both wearing blue polo shirts, working on the engine of a helicopter. The man is on the left, holding a clipboard and looking towards the woman. The woman is on the right, focused on the engine components. The background shows the interior of a hangar with a grid ceiling.

Helicopter Maintenance Training Solutions

Your worldwide
training partner
of choice

Elevate your training experience.

CAE has an unparalleled breadth of experience in helicopter simulation and training, and offers the broadest range of products and services for maintenance technicians and helicopter pilots. As a Part 147 approved training provider, CAE programs meet and in many cases, exceed regulatory requirements. Approving authorities include the European Aviation Safety Agency (EASA), the Civil Aviation Safety Agency of Australia (CASA) and Transport Canada (TC). Training can many times be arranged at short notice and CAE gives the customer the flexibility of either training at a CAE location or at the customer's home site of preference.

A relevant, real-world training experience

CAE designs and conducts training programs in a manner that exposes trainees to real-world aircraft interaction by incorporating a learning curriculum that is practical and skill based. Training is made more relevant to helicopter operations by incorporating a line-oriented approach focused on troubleshooting helping to reduce operational costs, as well as improving maintenance operations in general. Aircraft return to service cycle times is accelerated and out of service and accuracy of estimated time of returns (ETR) are improved.

Advanced/additional training

CAE now offers Human Factor training for maintenance personnel to assist in recognizing the human factors that play an important role during the maintenance and inspection process. Our Human Factor Initial is a 12-hour program and the Human Factor Recurrent is a 6-hour program. In addition, line maintenance training is also available for engineers. Both Breeze Hoist and Goodrich Hoist courses are available upon request. Be sure to inquire about our WebEx training to see if it is available for your course selection.
