

C-130 Tampa Training Center

CAE's Tampa Training Center provides expert aircrew, maintenance, and loadmaster training to operators of the C-130/L-100/L-382 Hercules aircraft. The company has over 20 years experience in training the United States Air Force, Navy, and Coast Guard, as well as over 20 international military and commercial operators of the C-130.

CAE is a leading provider of flight simulator products and services. The company offers a portfolio of products including fullmission simulators, flight training devices, reconfigurable and deployable trainers, part task trainers, integrated procedures trainers, and maintenance trainers. In addition, CAE is the world's second largest independent provider of aviation training services. CAE's network of training centers worldwide includes more than 100 simulators offering training on a range of aircraft platforms.

The company is also well known as the world's C-130 training partner. In addition to delivering training services for the C-130, CAE has designed and developed more training systems for the venerable Hercules aircraft than any other company. This training experience on the C-130 Hercules helps CAE deliver professional, realistic training of the highest quality.

Aircrew and maintenance training

The Tampa Training Center is a multi-trainer facility with fullflight simulators (including one FAA Level D qualified), part task trainers, a fuselage trainer, and more than 25 classrooms and briefing rooms. The company maintains an extensive documentation and media library for developing customized courseware. CAE's instructors are established experts with an impressive wealth of knowledge and experience on the aircraft. The Training Center offers bilingual (English/Spanish) aircrew and maintenance courses.

Instructor-led academic and simulator training is available to the entire aircrew for initial, conversion, and recurrent training.

- Aircraft commander/pilot in command
- Co-pilot/first pilot
- Flight engineer
- Loadmaster
- Instructor pilot/flight engineer

Maintenance training is available for troubleshooting and repair of a range of aircraft systems, including:

- Airframe/structural repair
- Fuel tank systems
- Environmental systems
- Hydraulics and pneumatics
- T-56 engine and propellers
- Electrical and avionics systems

Refresher training syllabus (pilots and flight engineers)

Systems review

Electrical

- AC unregulated
- AC regulated
- DC Distribution

Flight controls

- Primary
- Secondary

Fuel

- Tankage
- Flow control
- Refuel
- Jettison

Pneumatics

- Bleed air
- Air conditioning
- Pressurization
- Anti-icing
- Oxygen

Power Plant

- Engine
- Power control
- Propeller
- APU/GTC-ATM

Hydraulics

- Booster
- Utility
- Auxiliary
- Landing gear
- Brakes

Simulation training

Procedures

- Normal
- Non-standard
- Emergency

Limitations

- Systems
- Structural
- Fuel / cargo
- Airdrop

Performance

- Takeoff / landing data
- Climb
- Cruise
- Descent
